### Abstract:

China must improve the basic ability of industrial chain and strengthen its governance ability. On the one hand, China has gradually formed a comparative advantage in transforming and upgrading the industrial chain and laid a solid foundation for modernization. However, on the other hand, China's industrial chain still has a low position in the global value chain, and the low cost of labor brought by the demographic dividend has weakened the support for industrial development and other prominent shortcomings. It is imperative to lead the industrial chain to improve quality and efficiency through new industrial chain policies. As an industrial management method with Chinese characteristics, the “Chain Chief System” is gradually moving from “local experience” to “national practice”. It has become an exploration and innovation of China's industrial policy. It will accelerate the realization of industrial chain and innovation chain synergy and promote the realization of local governments and the modernization of governance systems and governance capabilities. Although the “Chain Chief System” has accumulated some local experience in practice, there are still problems such as the dislocation of the “Chain Chief” and the “Chain Master”, the rise of local protectionism, and the imposition of the “Chain Chief System”. At the same time, it also faces new challenges and requirements under the new situation, such as the COVID-19

level the “Chain Chief System” under the “National Chain Chief System” to lead the high-quality development of the industry chain and supply chain with new technologies and realize their deep integration; it is necessary to strengthen macroeconomic policy reserves, consolidate the foundation of industrial development, and improve the gradient cultivation mechanism of enterprises; it is also important to enhance international cooperation in the industrial chain to improve the overall industry security, do a good job in long-arm jurisdiction and response policy reserves, and enhance the overall security of the industrial chain.
